INTRODUCTION

This publication contains a list of geological programs for which reports and data have been released by the Canada-Newfoundland and Labrador Offshore Petroleum Board (C-NLOPB) pursuant to subsection 119(5)(d) of the *Canada-Newfoundland Atlantic Accord Implementation Act*, and subsection 114(5)(d) as amended, of the *Canada-Newfoundland and Labrador Atlantic Accord Implementation Newfoundland and Labrador Act* (the Acts). These subsections state that geological work performed on or in relation to any portion of the offshore area may be disclosed five years following the date of completion of the work. The programs are listed in chronological order by completion/release date.

Geological information may also be obtained from the wells that have been drilled in the offshore area. The Acts state that information obtained from a well may be released two years after the termination date of an exploratory well or, in the case of a delineation well, ninety days after the termination date or on release of information from the relevant exploratory well, whichever date is later. Data from development wells is released sixty days following termination date. This does not include interpretative geological work related to the well. This information is released five years after well termination date. A summary of data on all wells drilled offshore Newfoundland and Labrador, for which information has been released, is contained in the C-NLOPB publication "*Schedule of Wells, Newfoundland and Labrador Offshore Area*". Included in this publication, which is available from the C-NLOPB's office or from www.cnlopb.nl.ca, are geologic tops, test results, cored intervals, etc. A detailed listing of available well-related data may be obtained from the C-NLOPB.

This listing also includes reports prepared by C-NLOPB geologists and geophysicists using industry data submitted as part of the reporting requirements following exploratory activity in the Newfoundland and Labrador offshore area. The release date for C-NLOPB reports is the same as the release date of the data used in preparing the reports.

The Geological Survey of Canada also completes research on analysis of wells in the Offshore Area. Additional information may be obtained from www.nrcan.gc.ca

AREA OF JURISDICTION

The Canadian frontier lands under the C-NLOPB's jurisdiction are those submarine areas lying seaward of the low water mark of the Province of Newfoundland and Labrador and extending, at any location, as far as

- (a) any prescribed line, or
- (b) where no line is prescribed at that location, the outer edge of the continental margin or a distance of two hundred nautical miles from the baselines from which the breadth of the territorial sea of Canada is measured, whichever is greater (Figure 1).

DATA MANAGEMENT GEOLOGICAL PROGRAMS

Upon authorization of an application to conduct a geological program in the Newfoundland offshore area, a unique program number is assigned to the project by the C-NLOPB. For programs undertaken prior to January 6, 1986, this number was assigned by the federal Department of Energy, Mines and Resources. The number is coded to contain:

- the geographic region to which the program relates;
- the type of geophysical or geological work proposed;
- the company operating the program; and,
- the sequential number of that type of program operated by that company.

Therefore, using figure 2, the program 8924-P028-002E indicates the 2nd seismic reflection survey in the East Coast Offshore conducted exclusively for Petro-Canada, and carried out after January 6, 1986.

In some instances all materials resulting from geological programs have been microfilmed for archival and data reproduction purposes. The text has been reduced to 16 mm negative strips. Some geological reports are available in hard copy only, from the C-NLOPB. Released C-NLOPB reports are available in hard copy and digitally on CD.

Viewing by appointment only:

In order to facilitate retrieval of information, please forward an email to information@cnlopb.nl.ca including contact information, material requested, and preferred viewing time.

Operating hours are 8:30 am – 4:00 pm, Monday – Friday. The centre is located at:

1st Floor, TD Place
140 Water Street
St. John's, NL
A1C 6H6
Tel: (709) 778-4253
Fax: (709) 778-4249

Reproduction of released materials may be arranged, at the expense of the requestor, through the C-NLOPB. For programs submitted since 1981, mylar copies of the seismic lines are generally available. Printing of these may be carried out by a local firm, which will bill the purchaser directly.

For pre-1981 data, duplication from microfilm, again by a local firm, may be arranged. Further details may be obtained from the C-NLOPB office.

The following listing of released programs is broken down into five main geographic areas as shown in Figure 1. The listing contains the following information:

- Operator: the company for which the work was carried out;
- Program number: the unique program identifier;
- Completion date: completion date of field work. Data is released 5 years +6 months after date;
- Area; and
- Contents: a brief description of the report contents.

DATA MANAGEMENT – WELLS

As mentioned in the introduction to this publication, the information released from wells is divided into two data categories.

Category 1 data, which is factual data and materials obtained directly from the drilling of the well, is released to public examination two years after drilling of an exploratory well, or ninety days in the case of a delineation well, if that date falls after the release date for the relevant exploratory well. Production wells are released sixty days following well termination. Category 1 data includes the following:

- drill cuttings;
- conventional and sidewall cores;
- well fluid samples;
- final well report;
- open-hole logs and any cased hole logs run prior to well termination date;
- formation stimulation data, formation test results;
- oil, gas and water analyses;
- reservoir engineering data on cores and cuttings, porosity, permeability, fluid saturation;
- photographic record of core under natural and ultra-violet light;
- details and results of formation flow tests;
- drilling mud report forms;
- age determinations (K/Ar, etc.);
- deviation and drift records; gas detector log or mud logging records;
- completion data such as tubing and stimulation records;
- composite well records;
- final survey plan; and,
- wellsite survey information.

The second class of data, Category 2, is interpretative and is released 5 years after the well has reached total depth. Category 2 data includes geophysical and geological data as listed below:

- synthetic seismograms;
- velocity surveys;
- vertical seismic profiles;
- petrological reports;
- paleontological reports;
- palynological reports;
- geochemical reports; and,
- cyberlook logs.

The C-NLOPB's Core Storage and Research Centre was officially opened in June 1989. All well cuttings, cores, fluid samples, copies of logs and well history reports for released wells drilled in the Newfoundland and Labrador offshore area are available for examination at:

Canada-Newfoundland Offshore Petroleum Board
Core Storage and Research Centre
30-32 Duffy Place
St. John's, Newfoundland
Telephone: (709) 778-1400
Fax: (709) 778-1473
Email: csrc@cnlopb.nl.ca

Requests to obtain samples of well materials should be directed to the Exploration Department of the C-NLOPB. Viewing of released well data is also possible at the C-NLOPB offices by contacting the Exploration Department. Microfilm and hard copies of logs and well history reports are available for examination. Copying of released data from wells may be arranged through the C-NLOPB on a similar basis to that described for data from geological programs, detailed on page 3.

8930-A004-003E/ AMOCO CANADA PETROLEUM COMPANY LTD.	01-May-1997	North Grand Banks	1995 Thin section photos and brief descriptions of Catalina, Hibernia and Jeanne d'Arc.
8932-H006-003E/ HUSKY OIL OPERATIONS LTD.	13-May-1997	North Grand Banks	Biostrat report based on Whiterose E-09, Whiterose J-49, Whiterose N-22, Whiterose A-90 and Whiterose L-61.
8930-A004-005E/ AMOCO CANADA PETROLEUM COMPANY LTD.	02-Apr-1998	North Grand Banks	1997 Fluid inclusion stratigraphy of the Jeanne d'Arc Basin.
8932-J001-003E/ IMPERIAL OIL LIMITED	21-Apr-1998	Northeast NF Shelf	Palynology report from Blue H-28.
8933-A059-001E/ ANADARKO PETROLEUM CORP.	01-Sep-1998	North Grand Banks	Geochemical analysis of cuttings from Panther P-52, South Merasheen K-55, Baccalieu I-78, and Lancaster G-70.
8930-A059-001E/ ANADARKO PETROLEUM CORP.	15-Sep-1998	North Grand Banks	1998 petrographic analysis of 10 wells in the Hibernia and Flemish Pass areas.
8933-A059-002E/ ANADARKO PETROLEUM CORP.	15-Sep-1998	North Grand Banks	Fluid inclusion report from Kyle L-11, Golconda C-64, Lancaster G-70, Panther P-52, Terra Nova K-08, North Dana I-43 and Gabriel C-60.
8933-C004-001E/ CHEVRON CANADA RESOURCES LIMITED	01-Jan-1999	North Grand Banks	Geochemical analysis of Hebron D-94 oil samples, for field development.
8930-H029-002E/ HIBERNIA MANAGEMENT DEVELOPMENT COMPANY LTD.	19-Apr-1999	North Grand Banks	Petrographic mud invasion study of the HMDC Hibernia B-16 2, report no. 52135-99-3149.
8930-U017-001E/ UNIVERSITY OF ABERDEEN	10-Mar-2001	North Grand Banks	The use of integrated fluid inclusion studies in constraining oil charge history.
8930-C004-006E/ CHEVRON CANADA RESOURCES LIMITED	13-Apr-2000	North Grand Banks	XRD Analysis of core samples from Hebron D-94, Hebron I-13 and Hebron H-71.
8933-C004-002E/ CHEVRON CANADA RESOURCES LIMITED	07-Sep-2000	North Grand Banks	GeoChem analysis of West Ben Nevis B-75.
8932-P028-005E/ PETRO-CANADA	13-Oct-2000	North Grand Banks	Biostratigraphic correlation at Riverhead, East NL Shelf.

C-NLOPB Geological Reports – All Areas

<i>C-NLOPB Reports – All Areas</i>		
<i>Author</i>	<i>Report Number</i>	<i>Title</i>
I. Sinclair	GL-CNOPB-1987-01	Evolution of Mesozoic sedimentary basins on Grand Banks.
I. Sinclair	GL-CNOPB-1988-01	Biostratigraphic correlations over the Avalon, Ben Nevis, Nautilus and Dawson Canyon formations of the Jeanne d'Arc Basin.
I. Sinclair	GL-CNOPB-1988-02	Avalon, Ben Nevis and Nautilus formations of the Jeanne d'Arc Basin.
D. Sherwin	GL-CNOPB-1988-03	Geology and hydrocarbon potential of the Southern Grand Banks.
R. Stokes	GL-CNOPB-1988-04	Regional correlation of the Lower Tertiary in the Jeanne d'Arc Basin.
S. Gower	GL-CNOPB-1988-05	Hibernia Formation of the Jeanne d'Arc Basin.
I. Sinclair	GL-CNOPB-1988-06	Cross-sections of Late Triassic/Jurassic Sequences of 35 NE Grand Banks wells.
I. Sinclair	GL-CNOPB-1989-01	Cross-Sections of Middle Cretaceous Sequences of 32 NE Grand Banks wells.
I. Sinclair	GL-CNOPB-1990-01	Review of Western Newfoundland geology.
I. Sinclair	GL-CNOPB-1992-01	Geology and hydrocarbon potential of St. George's Bay Western Newfoundland.
D. Pennell	GL-CNOPB-1992-02	Avalon/Ben Nevis Correlation comparisons over Hibernia Field.
N. DeSilva, J McIntyre, T. Thompson, G. Power	GL-CNOPB-2001-01	Oil and gas potential of the Jeanne d'Arc Basin and the Ridge Complex, Grand Banks of Newfoundland.
N. DeSilva, J McIntyre, T. Thompson, H. Klassen	GL-CNOPB-2004-01	Hydrocarbon potential of the Flemish Pass Basin – Offshore Newfoundland and Labrador.
